

# From 10 to 3 days

## How to shorten your financial close (and stay sane!)

### Stuck at 10 days?

#### Finance team overwhelmed by complex journal entries between disparate systems?

Do they spend countless hours extracting data to perform reconciliations and close activities in spreadsheets, despite having an ERP system? Does your financial controller lack real-time visibility of close processes? These are all common financial close problems that lead to version control issues, burned-out staff and data integrity risks.

#### So, what's the solution?

A financial close tool that helps you extract, input, and reconcile quickly — at scale.

### Drop to 5 days with automation

#### Get rid of the manual workload

Manually matching and reconciling high volumes of complex data across disparate systems is the number one reason your team spends hours hunched over spreadsheets. Financial automation pulls data from your ERP system, integrates with your bank — and reconciles in minutes using auto-certification rules.

#### Maintain validation and reporting control

Standardising processes and embedding controls makes it easier to spot mistakes and mismatches. Add automation incrementally for maximum efficiency, and reallocate saved time to further optimisation.

### Hit the mighty 3-day turnaround — centralise, consolidate

#### Do more with the same people

By centralising data and close activities in one system, accounting teams have access to the same month-end data sources. You can do 2.6x more work without additional headcount — even as your business continues to scale.

#### Get the job done fast — and right

With everybody operating from one system, you get an automatic audit trail when needed. And with real-time visibility, your financial controller can also see where tasks and the team are in the process.

## Transform Finance — from manual workload to strategic impact

The most under-resourced finance teams can spend less time closing and refocus on analysis and strategic business partnerships. Staff aren't working excessive hours on transaction matching, freeing them to work on initiatives that add value and reduce human error. The result is a more engaged and loyal team.
